

InnuScience Product Use at the Grand Mosque in Mecca

May 9, 2019

To Whom it May Concern:

InnuScience are free from animal products - even when we grow our bacteria we only feed them with vegetal extracts (no meat extracts). This is a requirement for exporting to many countries for food safety reasons (including non-Muslim countries).

The best reference you can give your Muslim customers is that InnuScience's world largest single user is the great Mosque of Mecca. They buy and use our products extensively.

In fact, Saudi Arabia is a great market for us. We even have a local presence under the name of "InnuScience Middle East".
